

인공지능학과

Distinguished Lecture Series

일시: 2023년 11월 24일(금) 오후 1시 30분 ~ 2시 30분

장소: 우정정보관 604호

연사: 정형원 박사 (OpenAI ChatGPT)

제목: Large Language Models (in 2023)

초록: There is one unique aspect of large language models (LLMs): larger models exhibit abilities that were not present in the smaller models. These emergent abilities have far-reaching consequences in how we should work in the field of AI. I will share some of my observations on the implications of scaling and emergent abilities. After that, I will introduce multiple stages involved in the current generations of LLM training: pre-training and post-training (including instruction fine-tuning and RLHF). While a huge volume of research exists for each stage, the core aspects can be expressed relatively simply. I will introduce the fundamental aspects of each stage and discuss the unique challenges they pose.
